

In one week, visitors to one club shop were recorded as follows:

Monday	140	Wednesday	645	Friday	713
Tuesday	250	Thursday	242	Saturday	928

Can you make a simple bar graph that shows the number of people visiting the club shop during that week.

- 1** Can you find the average number of people who visited the shop each day?
- 2** On which day do you think the shop was least busy?
- 3** Why do you think that Saturday was the most popular day to visit the shop?
- 4** What were the total number of visitors between Monday and Thursday?
- 5** What were the total number of visitors to the club shop for the whole week?
